FOR IMMEDIATE RELEASE

**Campus Technologies Announces
Availability of the First 100 Megabit Per Resident Internet Service
for the Student Housing Market**

Campus Technologies' 100 Megabit Per User Internet Service Solution for the student-housing market meets increasing tenant demands and enhances the amenities that off-campus housing providers can now offer residents.

Philadelphia, PA, April 22 2010 – Campus Technologies Inc, an innovative designer, installer and manager of technology solutions in student-housing facilities, today announces the immediate availability of a 100 megabit per resident internet service solution for residents in off-campus housing environments.

Campus Technologies' off-campus housing internet service solution, believed to be the first 100-Megabit residential internet service available in the US today, provides up to 100 megabits per second internet connection to each resident user, far exceeding the few megabits per second connection that most competitive internet providers offer today.

This technology solution offers student housing community owners the opportunity to provide a higher level of internet connection to increase satisfaction among its residents, in addition to being an attractive differentiator for increasing occupancy at the facility.

“We expect demand for bandwidth to increase rapidly in student housing communities, and Campus Technologies is now able to satisfy that demand for the long term,” noted Andrew Marshall, executive vice president at Campus Technologies. “The Vision of Campus Technologies is to provide Internet as a utility service. Everyone expects their apartment or home to have as much electrical power as they could reasonably need, and we aim to provide Internet connectivity in the same way – as much as you need, when you need it,” added Marshall.

- more -

Campus Technologies recently completed deployment of its 100-Megabit-Per-Resident Internet Service Solution at two off-campus housing locations in University City, Philadelphia – home to such educational institutions as University of Pennsylvania, Wharton and several other notable institutions.
